Enhancing Risktionary with LLM-generated feedback

COREY HINES
SUPERVISOR: MIGUEL MORALES-TRUJILLO

Risktionary

a research platform for testing AI feedback

the game works...

5.5

NO GAME · EXAM QUESTION /9

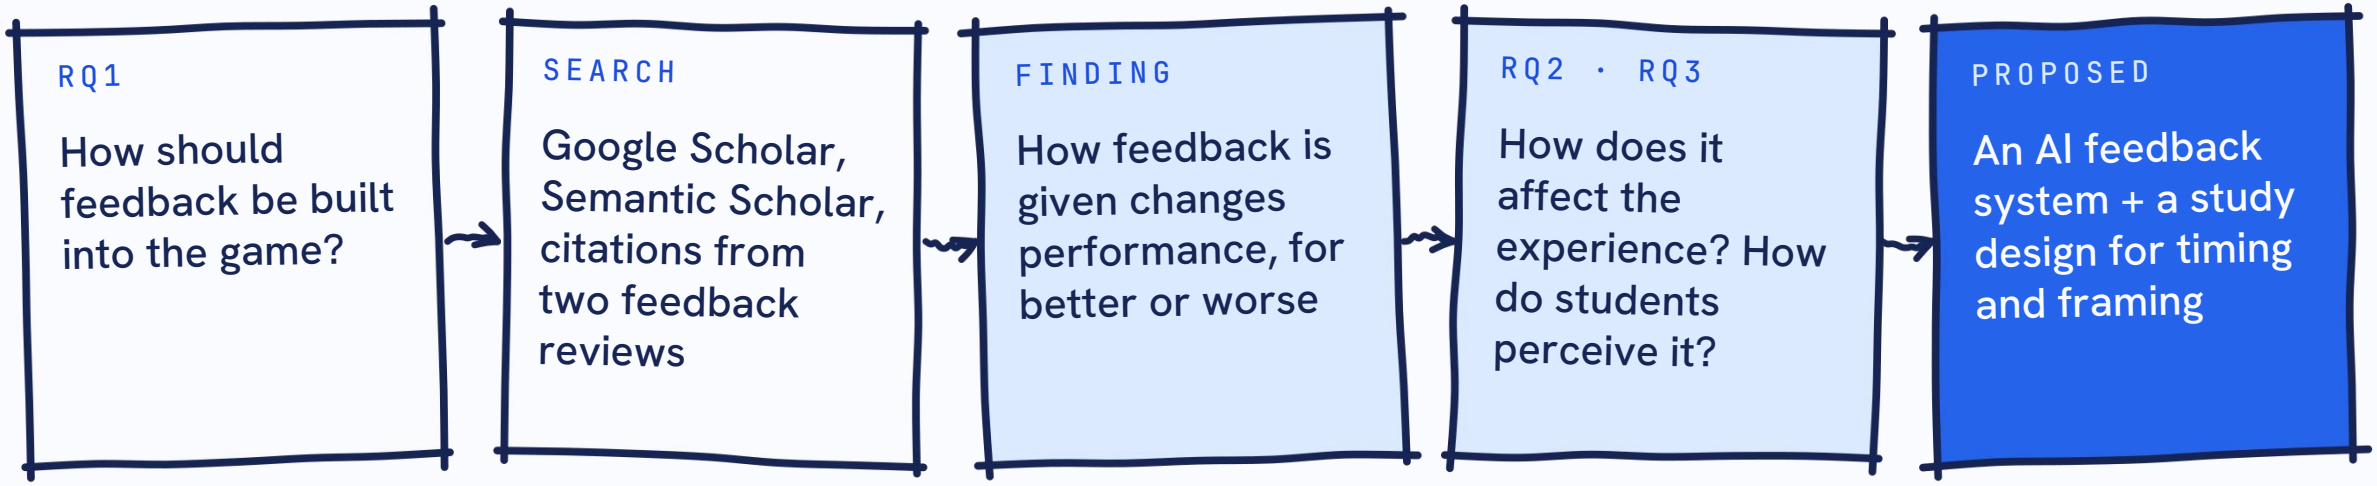

7.0

PLAYED RISKTIONARY · /9

...but a wrong guess teaches nothing

HOW THE RESEARCH WAS DONE

Each question led to the next.

1 in 3 interventions made performance worse

instant or delayed? positive, corrective or neutral?

OBJECTIVES → RESEARCH QUESTIONS

1	Rebuild the game so each player can get their own feedback, and log everything	→	**RQ1 · How can feedback be built in?**
2	An AI pipeline where only the tone or timing changes	→	**RQ1 · and stay controlled?**
3	Design the comparative study and pilot it	→	**RQ2 · How does it change the experience?**
4	Find out how students perceive AI feedback	→	**RQ3 · Clear, useful, how does it feel?**

long term: does timing & framing change learning?

HOW THE DEMO WILL GO

1 A recorded round

HOST + 3 PLAYERS, INSTANT AND DELAYED FEEDBACK

2 Under the hood

PIPELINE, PROMPTS, THE RESEARCH DATA EACH ROUND STORES

3 Pilot evidence

9 STUDENTS, GAME LOGS AND THE SURVEY

4 Quality & handover

TESTS, CI, DEPLOYMENT, READMES

A FULL ROUND, RECORDED

One round, four screens.

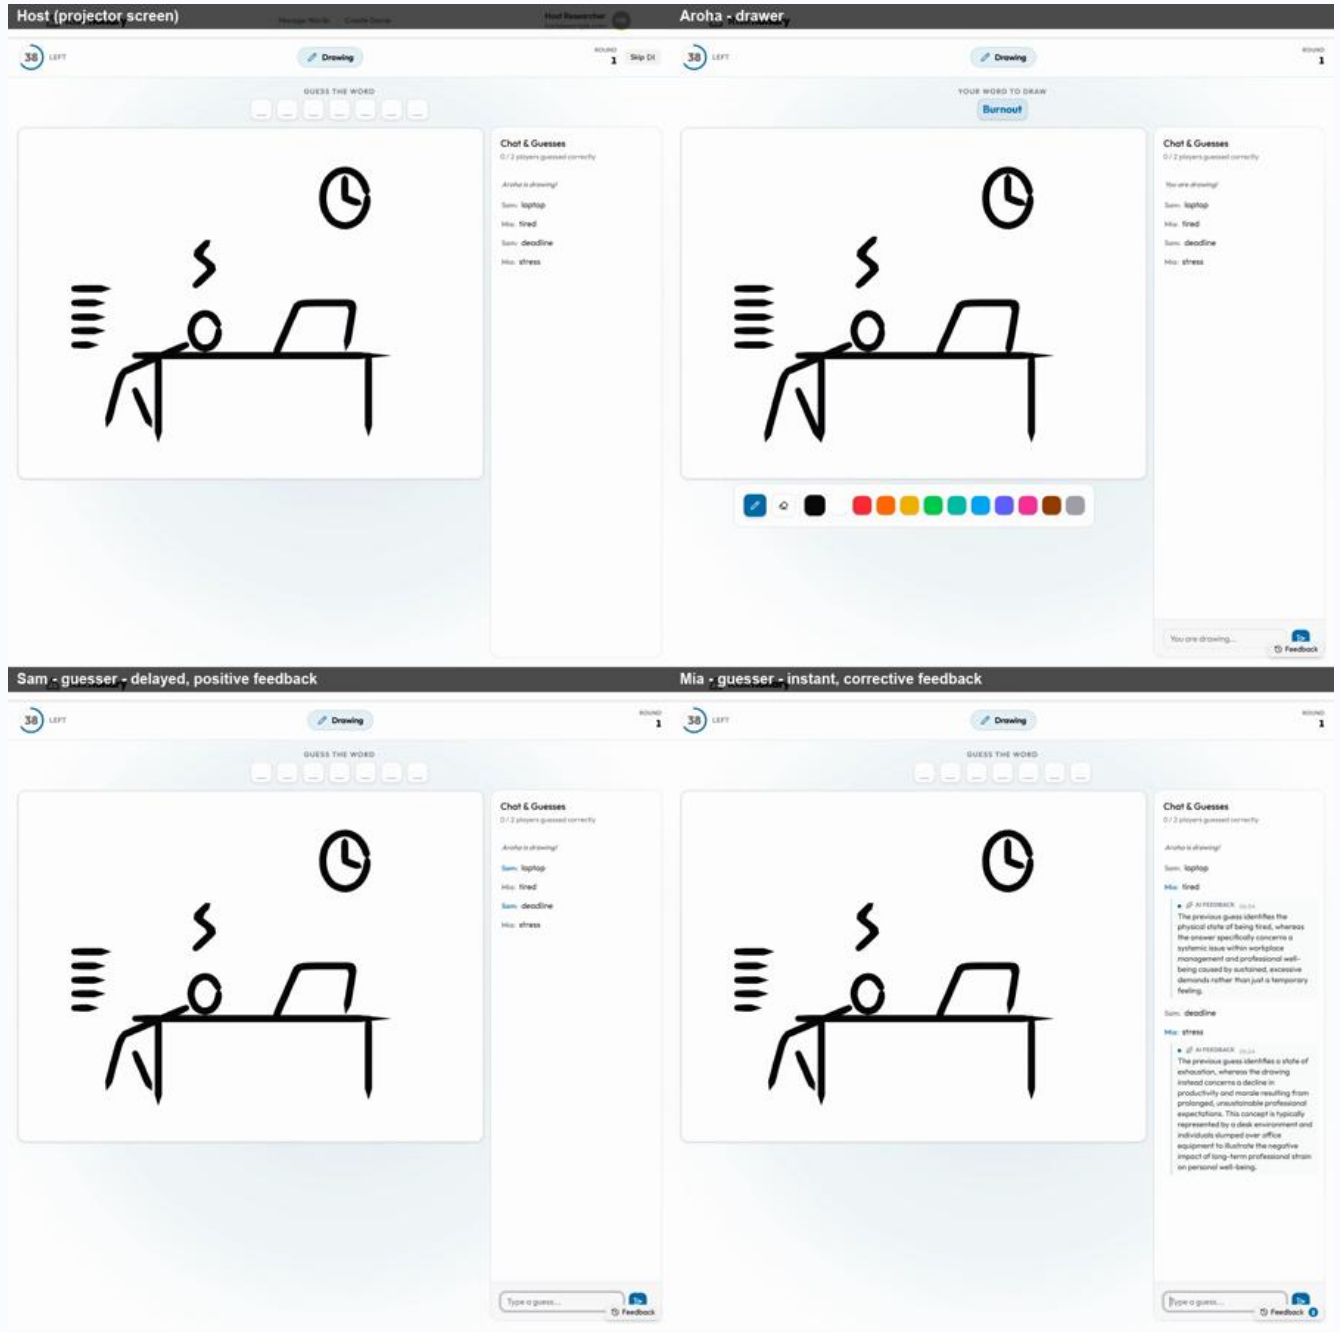

Host the projector screen

Aroha draws the risk

Sam delayed, positive feedback

Mia instant, corrective feedback

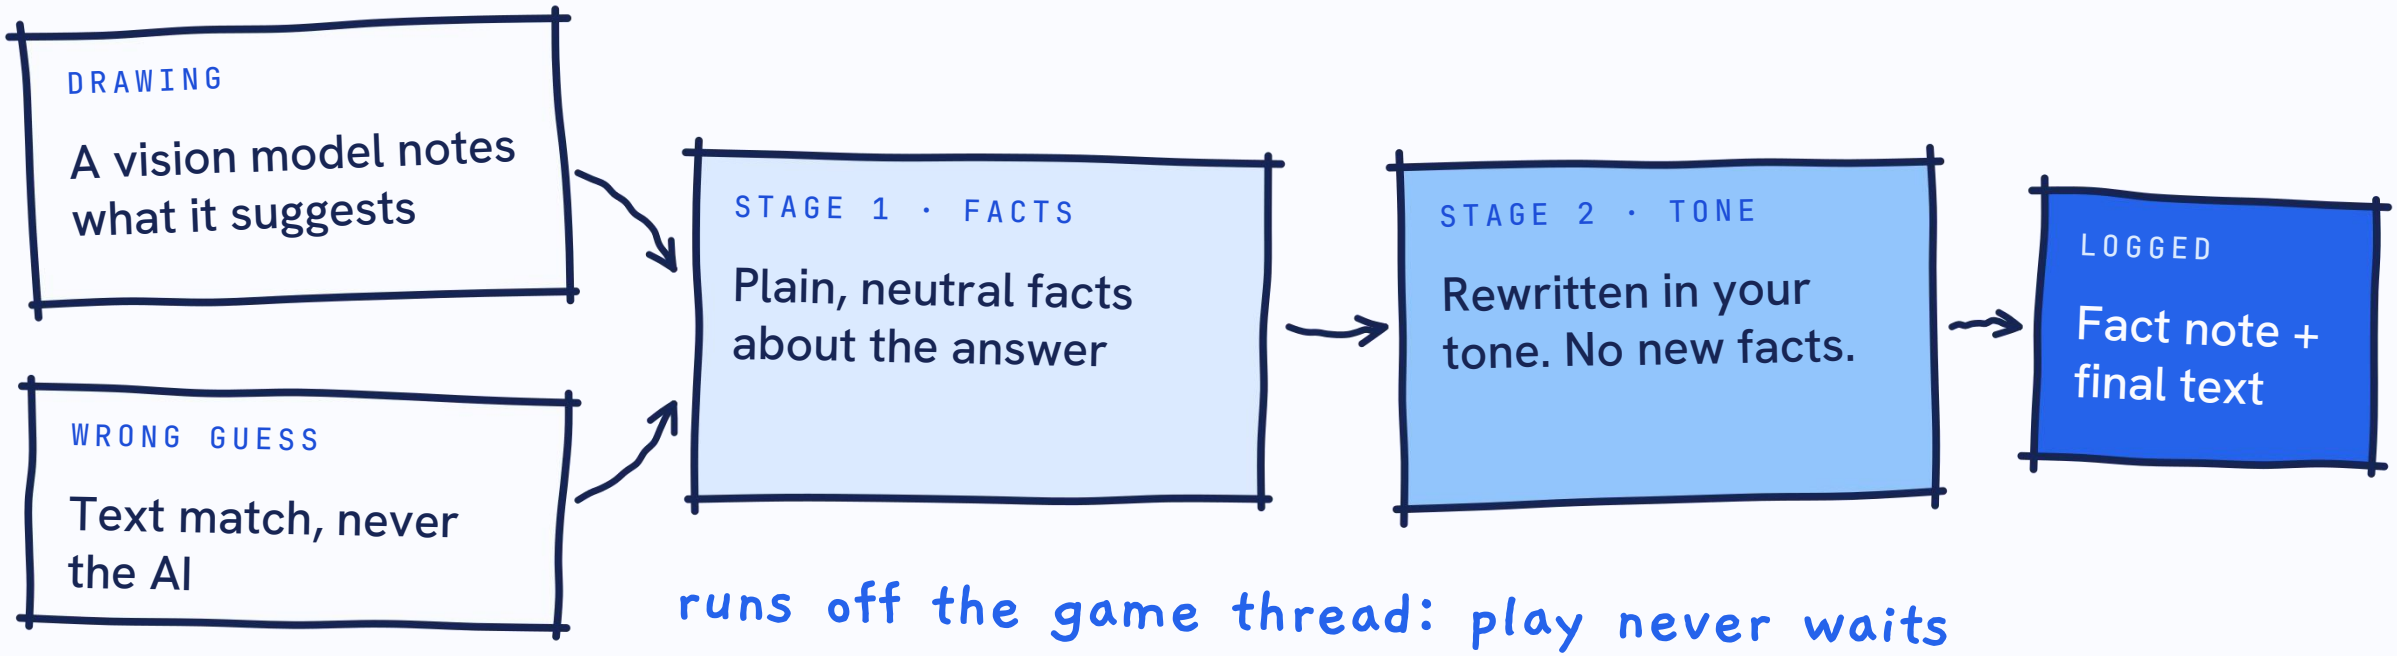

watch Mia's chat, then Sam's scoring card

UNDER THE HOOD

Facts first. Tone second.

so only the TONE changes

runs off the game thread: play never waits

RQ1 FROM THE LOGS

~3s

WRONG GUESS TO FEEDBACK

Runs live, every guess logged. But 2 of 38 hints leaked a synonym, and the tones drifted.

prompts alone aren't enough

RQ2 & RQ3 FROM THE SURVEY · N = 9

9/9

FOUND THE GAME ENGAGING

8/9

SAID IT ENCOURAGED THEM

3/9

5 said too long

SAID THE DETAIL SUITED THE PACE

QUALITY AND HANDOVER

where to find it

Tests on every push	→ **Kotest, MockK, CI with coverage**
Dependencies kept current	→ **Dependabot**
Deployed at the university	→ **Docker, Nginx, PostgreSQL**
Someone else can take over	→ **docs/: architecture, deployment, diagrams**
